Water – H₂O is a very common product in every aspect of our lives. Municipal city water plants are licensed to produce and deliver a safe product within EPA's standards. The chemistry is formulated at the water plant is to control the quality. When we start using filters or chemicals to try to improve quality, which varies daily, we can create a worse situation.

A dental practice is complicated, and the treatments are critical to the patients. Our company researched all areas and developed systems to cope with all critical issues.

The Dental Pure Water System produces UltraPure water which is delivered via new tubing to locations such as dental chairs, labs, drinking fountains, the lunch room and the coffee machine. Each location is also protected by custom anti-back flow valves to prevent cross-contamination.

The Dental Pure Air System cleans compressed air to 0.5 microns, dries, disinfects/sterilizes the air, as well as carbon absorbs mercury vapors. The compressed air, which is also protected by anti-back flow valves, is then delivered into the dental chairs and lab.

The Systems are certified by a lab test, the same as an autoclave test (a bacterial spore test in log5 & log6), which makes this system 99.999999% = log6 Pure

The Dental Pure Vacuum Lines – eliminating Amalgam build up with improved vacuum-New!

Profits & Productivity will be Increased up to 55%

Instruments Repairs will be Reduced up to 97%

Boil Alert = Zero Downtime & Remains Pure—1 week = \$42k to \$48k

Health Hazards – NONE – (known per MSDS)

Savings of over \$176,684 ~ 11 yrs in service = 39,564 Hr's at 5 chair DDS

Warm Pure Water at A/W Syringe – 85 to 105°F & Mouthwash Bottle

Over 485,646 Hours ~ 245,376 Gallons Produced Pure! – Log6 – 0 CFU's

Our Systems Saved over \$1,866,840.00 in 11 years!
